## **EDUCATION**

## University of Waterloo

Waterloo, ON

Bachelor of Applied Science in Computer Engineering

Sept. 2021 - May 2026

- Recipient of Richard & Elizabeth Madter Entrance Scholarship and President's Scholarship of Distinction
- Relevant Courses: Signals & Systems, Digital Computers (ARM), Instrument & Prototyping Lab, Embedded Microprocessing Systems

# Experience

# Digital IP Verification Intern

May 2023 - Sep. 2023

Kanata, ON

NXP Semiconductors Canada

- UVM SystemVerilog: Designed testbench stimulus environment for an IP Block in Dataplane processing.
- Test Planning: Created Simulation scenarios for testing IP block features and edgecases.
- Simulation: Worked on Simulation Environment programming to reach total functional coverage.

# Software Engineering Intern

Sept. 2022 – Dec. 2022

Synapse Product Development

Seattle, WA

- Prototyping: Leveraged Zephyr RTOS to create a proof of concept on NRF52 BLE device.
- Python APIs: Developed company specific lab automation software for equipment from Agilent, Keysight, NI, Tektronik.
- Automation: Streamlined testing and in house procedures using Python and Bash.
- Driver Development: Designed and implemented drivers for the controls of PCB testing Device (I2C, UART)

## Firmware developer

Jan. 2022 – April 2022

Ford Motor Company of Canada

Remote

- Unity/Cmock Test framework: Lead developer for optimization for unit testing, achieving up to 30% faster runtime while using 50% less manually written test cases.
- Automation: Improved Jenkins CI/CD pipelines to support unit testing automatino using Python for Linux
- Embedded Trace Debugging: Tested logging and interrupt algorithms and debugged on hardware test benches through CAN and Serial.
- Automotive Design: Maintained AUTOSAR standard design with ISO26262 safety design using Davinci Configurator.

## Firmware Team Member

Sept. 2021 – Present

UW Midnight Sun Solar Rayce Car Team

Waterloo, ON

- Macro Functionality: Helped in abstracting RTOS functionalities through macros for ease of use in embedded programming.
- Testing: Programmed smoketesting firmware in C for STM32 processors in Linux virtual machine using Vagrant Virtual Box.
- CAN API autogeneration: Implemented C file autogeneration using input yaml files through Python and Jinja2.

### Projects

LC VM: A C functional approach to implement an educational ISA. Improves on online design using Python data logging. Morse Code Time Machine: A multi-player STM32 hardware puzzle project created for escape Room environment Cube Solver: A Program that can solve any Rubix Cube you scramble. Optimized for bitwise operations

### TECHNICAL SKILLS

Languages: Python, C/C++, Tcl, Bash scripting, ASM, VHDL, SystemVerilog/Verilog Tools: Quartus, Git, Linux, Qemu, LLDB/GDB, Docker, WireShark, UVM, Matlab

Hardware: Oscilloscopes, Logic Analyzer, Multimeters, Spectrum Analyzer

Protocols: TCP/IP, JTAG, Serial, Ethernet, CAN/CAN-FD, LIN
